

LARGE FORMAT EMISSIVE DISPLAY

Abstract of the Disclosure

A backframe may be utilized to align a plurality of emissive display tiles precisely with respect to one
5 another. The individual display tiles may be removable from the backframe for replacement or other reasons. As a result, the spacing between individual tiles in an overall large format display may be precisely controlled in some cases. In addition, regularly occurring gaps between
10 adjacent tiles may be filled with a suitable light absorbing material to reduce the visibility of seams.
